

REACH Directive

The REACH directive (Registration, Evaluation, Authorisation of Chemicals) is intended to improve protection of man, animals and environment against detrimental chemicals. Everyone bringing more than one ton of a chemical to the European market annually is subject to the REACH directive.

E-T-A produces exclusively non-chemical products. We are in close contact with our suppliers and can confirm that the few process chemicals required for manufacturing E-T-A products are either not covered by the REACH directive or have already been registered by the supplier.

According to our knowledge our products do not contain any SVHC (substances of very high concern) as listed in the most recent [candidate list](#) issued by the ECHA.

Therefore the REACH directive 1907/2006/EC does not apply to E-T-A products. We do not require a registration, evaluation or approval to the REACH directive neither do we have to establish a safety data sheet to 91/155/EWG or 67/548/EWG.
